Draw a Witch on a Broomstick: Silhouette, Hat and Bristle Detail

Original worked example / unchanged complete key

Prompt: On a 20 cm by 28 cm sheet, draw a witch on a broomstick using a 14 cm by 18 cm figure box. The hat cone is one-third of the box height and the bristle fan is one-quarter of the box width. Describe the construction and give the calculated measurements.

Answer: Hat cone height = 18 cm divided by 3 = 6 cm. Bristle fan width = 14 cm divided by 4 = 3.5 cm. Draw the box, place the seat anchor slightly left of centre, outline the torso as a rounded wedge, add bent legs overlapping the handle, draw the handle from seat to lower right, fan the bristles to about 3.5 cm wide, build the hat to about 6 cm tall, and add two cape panels leaving a gap at the handle. Check by viewing from one metre: the silhouette should read as a witch on a broomstick.
