Draw an Eyebrow: Arch, Hair Strokes, and Eye Placement

Original tasks 1, 2 / independent work

Task 1

An eye is drawn with a height of 18 mm. Mark a brow-to-eye gap of 9 mm above the top of the eye. Describe where the brow's lower edge should be placed and how you would check the gap at three points.

Task 2

A brow is 40 mm long from inner start to outer tail. Place the arch peak about two-thirds of the way along the brow. Calculate the distance from the inner start to the peak and from the peak to the outer tail.

Draw an Eyebrow: Arch, Hair Strokes, and Eye Placement

Original tasks 3, 4 / independent work

Task 3

Describe the direction of five hair strokes near the inner start, five at the arch peak, and five near the outer tail, using the travel rule from the lesson.

Task 4

A practice brow has a lower edge that is 6 mm above the eye at the inner start, 10 mm at the peak, and 8 mm near the tail. Identify the problem and state one adjustment.
