Drawing Paper and Fabric Folds: Crease and Overlap Construction

Ordinary topic reference / separately checked pixels

Paper/fabric fold construction / physical mm print 1:1 / no coincident dashed duplicates

Solid marks the visible shared crease/boundary once. No separate hidden path is specified in these four diagrams, so no dashed duplicate is added. Light filled areas identify the requested front region, not lighting. The sequential packet key reverses the complete moving packet before placing it in front of the receiving packet.

Drawing Paper and Fabric Folds: Crease and Overlap Construction

Original worked example / unchanged complete key

Prompt: Construct a single crease on a rectangular paper 10 cm by 6 cm (hypothetical example). The crease runs from the midpoint of the left edge to the midpoint of the right edge, and the top half overlaps the bottom half. Draw the crease and front boundary solid, add one compression arrow, and state whether the hidden edge has a separate location or coincides with the crease. Do not draw a dashed duplicate on the same coordinates.

Answer: Draw the 10 cm by 6 cm rectangle lightly, with the top and bottom midpoints 3 cm from either end. Draw the horizontal center crease as one solid line. The top half is in front; its folded leading edge is visible on the crease. In this flat construction the bottom half's original top edge coincides with that same crease, so do not draw a separate dashed copy. Add a downward compression arrow from the top half toward the crease. Check that the crease appears once as a solid line and the arrow points toward it.

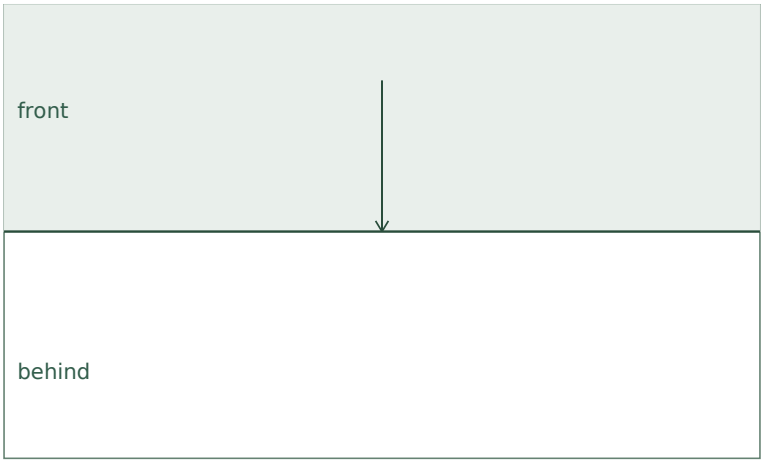

Reason: The front and hidden boundaries meet at the same crease location in this construction. A single solid line represents the visible coincident edge; a second dashed line would duplicate the same coordinates rather than show a separate hidden edge.

Check: Measure both side midpoints at 3 cm. Confirm one solid crease connects them, no dashed duplicate is drawn on that same line, and the compression arrow points toward the crease.
