Desert Lizard Drawing: Body Shape, Toes, and Habitat Pose

Original worked example / unchanged complete key

Prompt: Draw a desert lizard on a sand ground line with a low basking pose. Use the five-toe fan convention and check torso-to-head ratio.

Answer: A completed drawing shows a rounded wedge head, an oval torso about twice the head length, a tapering tail curved away from the legs, and four feet on the ground line. Each foot has five toes in a fan with the middle toe longest. The head is slightly lifted and the belly is close to the ground. The toe count totals twenty, and the tail does not cross the legs.
