Draw a Running Chicken: Leg-Position Motion Study

Original tasks 1, 2 / independent work

Task 1

In a four-frame strip, frame one has the near foot 2 units forward and the far foot 2 units back. What is the stride span?

Task 2

Frame two shows the near foot under the body and the far foot 3 units forward. Which foot should be forward in frame three if the sequence alternates?

Draw a Running Chicken: Leg-Position Motion Study

Original tasks 3, 4 / independent work

Task 3

A student draws frame four with both feet 2 units forward. What is the main error and how to fix it?

Task 4

If the body midline is 4 units above the baseline and the head is 2 units above the midline, what is the total height from baseline to head top in this hypothetical example?
