Draw a Dandelion with Drifting Seeds and a Tilted Stem

Original worked example / unchanged complete key

Prompt: Draw a dandelion head 6 cm across with a stem tilted 20 degrees to the right and three drifting seeds at 2 cm, 4 cm, and 7 cm from the head edge along a curved path.

Answer: A light 6 cm circle with a center dot, eight stalks ending in seed points, and five straight pappus lines per fan forming a circular silhouette. The stem curves gently from the lower edge at a 20-degree tilt from vertical. A light curved path extends right with three seed positions at 2 cm, 4 cm, and 7 cm from the head edge, each drawn with a rotated five-line fan. Guide circle erased after the silhouette is stable.
