Small Snake Drawing: Coil and Scale Pattern Steps

Original worked example / unchanged complete key

Prompt: Draw a small coiled snake with three arcs, a diamond pattern, and a head at the outer end. Use a 10 cm square and 5 mm arc gaps.

Answer: A balanced coil of three overlapping arcs with even 5 mm gaps, a small oval head at the outer end, a tapered tail at the center, and a diamond pattern that follows each arc and stays inside the body outline. Scale size reduces near the tail.

Reason: Three arcs create a readable coil without crowding. Even gaps keep the spiral balanced. The diamond pattern follows the curve and stays inside the outline, which prevents pattern crossing. Reducing scale size near the tail follows the stated convention.

Check: View from arm's length. Confirm three arcs with even gaps, head and tail attached, and no pattern line touching the body outline. Measure gaps with a ruler if needed.
