Crow Drawing Step by Step: Wing and Beak Construction

Original worked example / unchanged complete key

Prompt: Draw a side-view crow facing left using the construction steps. Use a proportional unit of 2 cm. The body oval is 4 cm long (two units) and 2 cm tall (one unit). The head circle is 1 cm tall. The beak is 0.5 cm long. The tail wedge is 2 cm long. The wing tip ends 0.5 cm before the tail tip.

Answer: A completed side-view crow with a 4 cm body oval, a 1 cm head circle above and forward, a 0.5 cm heavy beak, a 2 cm tail wedge, and a folded wing whose tip stops 0.5 cm short of the tail tip. The eye is a small dot above the beak base, and two short legs extend below the body.
