Fursuit Drawing: Head, Paws, and Suit Proportions

Topic reference / ordinary illustration

Ordinary topic reference. Hypothetical dimensions in the four tasks are supplied in their own text; this illustration is not their measured answer.

Fursuit Drawing: Head, Paws, and Suit Proportions

Worked example / complete source key

A head has a baseline-to-midline x-height of 3 units and a crown height of 4 units above the midline. The torso is planned as 5 units from shoulder to hip. The upper arm is 2 units, the forearm is 2 units, and the paw length is 1 unit. Check the total limb length and state whether the plan is consistent.

Answer: Head height is 3 + 4 = 7 units. Limb total is 2 + 2 + 1 = 5 units. The torso is 5 units. The plan is consistent because each segment is stated in the same unit and the limb sum equals the planned total of 5 units.
