Realistic Barn Drawing: Weathered Siding Texture

Original tasks 1, 2 / independent work

Task 1

A board is 1.2 cm tall. Using the convention, where is the midline, and how would you divide the lower and upper bands if the darkest band is 0.3 cm and the top shadow line is 0.1 cm?

Task 2

A roof has shingle rows 0.8 cm tall. If you draw 5 rows, what is the total roof height, and where is the midline of the third row measured from the bottom of the roof?

Realistic Barn Drawing: Weathered Siding Texture

Original tasks 3, 4 / independent work

Task 3

A student shades a siding board with the darkest value at the midline and the lightest at the baseline. Describe the correction and state one check to confirm the fix.

Task 4

An eave shadow is drawn lighter than the siding baselines. Explain why this weakens the drawing and give a numerical example using hypothetical values: siding baseline value 7 (dark), eave shadow value 5 (lighter). What should the eave shadow value be?
