Draw a Realistic Semi Truck: Cab, Trailer, and Wheel Detail

Original worked example / unchanged complete key

Prompt: Draw a semi truck in side view with a conventional cab and a long trailer. Use a ground line, place one front wheel and two rear trailer wheels, and add a hitch plate. Keep proportions believable.

Answer: A completed side-view drawing shows a long trailer box about three times the cab length. The cab has a hood, slanted windshield, and a small grille. The front wheel sits under the cab, and two rear wheels sit under the trailer rear. All wheels touch the ground line. A small hitch plate connects cab and trailer near the trailer floor. Light shading under the truck grounds it.
