Fire Animation Drawing: Flame Shapes and Flicker Frames

Original worked example / unchanged complete key

Prompt: Draw a four-frame flicker sequence on a 21 cm wide paper using four 4 cm frame boxes with 1 cm gaps. Frame 1 tip leans left, frame 2 center, frame 3 right, frame 4 center. Base width is 3 cm in every frame. Describe the drawing and check it.

Answer: The four boxes are aligned on a ground line. Each flame has a 3 cm base, a tapered body, and an inner heat shape. Frame 1 tip leans left; frame 2 tip is centered; frame 3 tip leans right and one side lobe shifts; frame 4 tip returns to center. The base width is the same in all frames. Check: tip order is left, center, right, center; base width changes by less than one pencil width; inner shape stays inside the outline; boxes are numbered and evenly spaced.
