Poppy Line Drawing: Petal and Stem Contours

Original worked example / unchanged complete key

Prompt: On a 12 cm by 16 cm panel, construct a poppy with one curved stem from the bottom limit to a centre guide 1.5 cm across, then add four petal contours with varied widths and consistent single-weight lines.

Answer: The stem is one smooth curve meeting the centre guide. Four petal contours radiate from the guide, each closed or returning to the guide, with slight overlaps and varied widths. All final lines share one tested weight, and construction guides are faint or removed. The drawing reads as a line-only poppy without shading.
