Draw Sarmale: Rolled Cabbage Cylinders in a Pot

Original worked example / unchanged complete key

Prompt: Draw one sarmale roll with a tapered end and two leaf-wrap lines, then place it inside a pot rim ellipse. Use a light source from the upper right.

Answer: A short cylinder about 3 units long and 1.5 units wide, with the left end narrowed to about 1 unit. Two curved lines cross the body diagonally. The roll sits inside a wide ellipse pot rim, with the tapered end pointing left. Shading is darker on the lower left of the roll and on the inner left pot wall, because the light comes from the upper right.
