Tundra Plants Drawing: Shape and Texture Study

Original worked example / unchanged complete key

Prompt: Draw a cushion plant with width 30 millimeters. Use short strokes for texture, leaving at least half the interior unmarked. Label the dome outline, radiating lines, and ground line. Check that height is about one-third of width.

Answer: The drawing shows a flattened dome 30 millimeters wide and about 10 millimeters tall. The dome outline is a wide semicircle with small bumps along the top. Inside, six short curved lines radiate from the center to the outline without crossing it. Short strokes follow the dome curve, covering about 40 percent of the interior, concentrated near the base. The ground line is a straight horizontal line touching the dome base. Labels mark the dome outline, radiating lines, and ground line. Height-to-width ratio is 10:30, or 1:3, matching the check.
