Newt Anatomy Drawing: Label Body, Limbs, Tail, and Skin

Original worked example / unchanged complete key

Prompt: Draw a newt using a 12 cm by 8 cm area with body 5 cm, head 1.5 cm, tail 4 cm, and limbs 1.5 cm. Label body, front limb, hind limb, tail, and skin. Check total length.

Answer: Total length = 1.5 + 5 + 4 = 10.5 cm, which fits within 12 cm. The drawing shows a body oval centered on the midline, a head wedge at the left, four limbs at attachment points, a tapering tail, skin dots, and five labels with straight leader lines. Each leader line touches only its feature and no lines cross.
