Palmchat Drawing: Perched Pose, Beak and Tail Construction

Original worked example / unchanged complete key

Prompt: Draw a palmchat perched on a branch using a body oval, a head circle, a short stout beak, and a tapered tail. Use an x-height of 4 mm as a hypothetical unit. Check that the beak is about one-third of head width and the tail is about two units long.

Answer: The finished drawing shows a rounded body tilted forward, a head circle overlapping the top, a short wedge-shaped beak with a rounded tip, and a tapered tail angling downward. The feet grip the branch, and the body sits over the feet. The beak measures about one-third of the head width, and the tail measures about two 4 mm units. Guide lines are erased, and the outline is clean.
