Contour Line Drawing of Shoes: Slow vs Quick Edge Study

Original tasks 1, 2 / independent work

Task 1

Draw a slow contour of one shoe on plain paper. Keep the pencil on the paper and include the sole outline, heel curve, and one lace edge. Then write one sentence naming the edge that was hardest to follow.

Task 2

Draw a quick contour of the same shoe in about 30 seconds using one continuous line for the main outline. Add one lace edge. Place it beside the slow contour and answer: which drawing shows the heel curve more accurately?

Contour Line Drawing of Shoes: Slow vs Quick Edge Study

Original tasks 3, 4 / independent work

Task 3

On a sheet, draw two equal boxes labeled Slow and Quick. Sketch a simple shoe outline above them as a reference. In the Slow box, trace only the sole edge and heel edge. In the Quick box, trace only the sole edge. Write one sentence comparing the sole edge in both boxes.

Task 4

Choose a different shoe, such as a boot or sandal. Draw a slow contour including the sole outline and heel curve. Then list two visible edges that are present on this shoe but were not present on the first shoe.
