Car Contour Drawing: Single-Line Edge Practice

Original worked example / unchanged complete key

Prompt: Draw a single-line contour of a simple side-view car with a flat lower body, a gently curved roofline, two wheel arches, and one side window. Start at the front lower body and keep the pen on the paper.

Answer: Start at the front lower body. Move up the front edge to the hood, then along the roofline in one gentle curve to the rear. Continue down the rear edge to the lower body. Draw the rear wheel arch as a semicircle connected to the body line, then the front wheel arch. Cross over the body line to close each arch. Add the side window edge as a connected line from the roofline to the lower window line. The result is one continuous outline with no shading and no mechanical detail.
