Dog Contour Drawing: Single-Line Edge Practice

Original worked example / unchanged complete key

Prompt: Draw the outer edge of a dog's ear in one continuous line, then check start, middle, and end against the reference.

Answer: The line begins at the ear base, curves up to the tip, and returns to the head without lifting. At the start, the line meets the head edge; at the middle, it follows the widest part of the flap; at the end, it returns to the base. A measured edge length of 6 cm on the drawing and 6 cm on the reference, using the same ruler, shows a close match as a hypothetical example.
