Pear Contour Drawing: Blind and Slow Line Practice

Original worked example / unchanged complete key

Prompt: A student draws a pear in blind contour on a 12 cm by 16 cm frame. The line starts at the stem, loops once near the body, and ends at the base. The stem is visible, the body is wider than the stem, and the base is flatter than the top. The main line is continuous. Score the drawing with the four-point rubric and state one improvement.

Answer: Score: 4 out of 4. Stem visible (1), body wider than stem (1), base flatter than top (1), continuous main line (1) because the line loops but does not break. Improvement: slow down at the stem-body junction so the line follows the edge without circling back.
