Animal Symmetry Drawing: Complete the Mirrored Half

Topic reference / ordinary illustration

Ordinary topic reference. Hypothetical dimensions in the four tasks are supplied in their own text; this illustration is not their measured answer.

Animal Symmetry Drawing: Complete the Mirrored Half

Worked example / complete source key

A half-animal reference shows a nose tip on the axis at row 3, an eye centre at row 5 and column distance 2 left, and an ear tip at row 2 and column distance 3 left. Complete the mirrored half by stating the reflected positions and describing the outline.

Answer: Nose tip stays on the axis at row 3. Eye centre reflects to row 5 and column distance 2 right. Ear tip reflects to row 2 and column distance 3 right. Connect the reflected points with a smooth contour that matches the reference: from the nose tip, curve up to the ear tip, then down along the back to the leg joints and tail end, keeping each matched point at the same row and equal distance from the axis. Fold along the axis to confirm alignment.
