Upside-Down Flower Drawing: Orientation Practice with Petals and Stem

Original worked example / unchanged complete key

Prompt: A reference shows an upright flower with five petals pointing up and a stem leaning 15 degrees left of vertical downward. Describe how to draw the upside-down version in a 12 cm by 16 cm frame.

Answer: Place the bloom center near the top of the frame. Draw five petals with narrow ends at the bloom center and wide tips pointing downward, spaced evenly. Draw the stem from the bloom center toward the bottom edge, leaning 15 degrees right of vertical as a hypothetical example, because rotating the upright reference 180 degrees reverses the lean direction. Check that all petal tips are below the bloom center and that the stem reaches the bottom edge.

Reason: Rotating 180 degrees flips both vertical and horizontal directions. Upward petals become downward petals, and a left-leaning stem becomes right-leaning. The bloom stays opposite the stem end.

Check: Rotate the finished drawing 180 degrees. It should resemble an upright flower with petals up and a stem leaning left downward. Count five petals and confirm the stem reaches the bottom edge.
