Flour Sack Contour Drawing: Blind and Slow Practice

Original worked example / unchanged complete key

Prompt: Use the text-only sack reference: 12 cm tall, 8 cm wide at the base, narrower at its gathered top, gently bowed sides, rounded lower corners. Draw the outer silhouette in slow contour at the same scale. Start at the top-left, move down the left edge, across the base, up the right edge, and close the top. Check the start and end points and tally only interior direction changes.

Answer: The drawn silhouette begins and ends near the top-left corner within about 1 cm. It follows the gently bowed left side, the roughly horizontal 8 cm base, and the bowed right side, then closes across the gathered top. Count only interior direction changes, excluding start and end: the two lower corners and the top-right turn give three major changes, with any small observed curve changes tallied separately.
