Timed Skull Anatomy Drawing Practice: Landmarks and Quick Sketches

Original tasks 1, 2 / independent work

Task 1

Front-view sketch: widest cranium span is 8 cm. Using the one-quarter rule, what is the estimated orbit center spacing? Using the one-third rule, what is the estimated chin drop below the orbit line?

Task 2

Side-view sketch: distance from back of cranium to front of face is 10 cm. Using the halfway rule, where is the ear line? If the jaw angle sits 1.5 cm below the ear line, what is its vertical position relative to the back-to-front length?

Timed Skull Anatomy Drawing Practice: Landmarks and Quick Sketches

Original tasks 3, 4 / independent work

Task 3

A 2-minute timed sketch scores 3 out of 5 check points. According to the routine, what should you do next, and what is one likely cause if the missed points are the widest left and widest right?

Task 4

You have 1 minute total. Propose a three-block timing plan using 15 seconds, 15 seconds, and 30 seconds, and name the landmark focus for each block.
