Reference / reference

Original partial shape remains dark; additions are separate sample choices.

One valid completion only. Keep the supplied part visible and explain the new idea; alternative additions are allowed by the source rubric.

Think Outside the Box Drawing Worksheet: Creative Partial-Shape Completion

Original worked example / unchanged complete key

Prompt: A partial shape is an open square missing its top side. Complete it into a creative drawing that keeps the open square visible. Describe the drawing and explain how it meets the rubric.

Answer: Draw the open square as the open top of a cardboard box, then add two flaps folded outward and a small label on the side. The open square remains the box opening. This meets use of the partial shape because the printed shape is the box opening; originality because a cardboard box is less obvious than a window or frame; clarity because the flaps and label make the box idea readable; and care because the lines are deliberate and the box is not crowded. A valid alternative is to complete the open square as a picture frame with a drawing inside, provided the open square remains visible as the frame.
