Anime Pose Drawing: Proportion Guides and Line-Weight Practice

Topic reference / ordinary illustration

Ordinary topic reference. Hypothetical dimensions in the four tasks are supplied in their own text; this illustration is not their measured answer.

Anime Pose Drawing: Proportion Guides and Line-Weight Practice

Worked example / complete source key

A standing anime figure is planned at seven head units. The measured head height is 3 cm. The shoulder landmark is placed at 1.5 HU, the hip at 3.5 HU, and the ankle at 7 HU. The outer silhouette is drawn thick, the face details thin, and one hair strand tapered. Check the total figure height and line-weight consistency.

Answer: Total planned height is 7 HU times 3 cm, which equals 21 cm. The ankle landmark at 7 HU matches the total height, so the proportion plan is consistent. The line-weight check passes because the outer silhouette is thick, interior details are thin, and at least one flowing element tapers. If the drawn figure measures 20 cm, the difference is 1 cm, which is within a half-head-unit tolerance of 1.5 cm.
