Poinsettia Contour Drawing in Black and White

Original worked example / unchanged complete key

Prompt: Draw a single poinsettia bract in contour line using the convention: one black line on white paper, no shading. The reference bract is 6 cm from tip to base and 4 cm wide at its widest point. Describe the line path and how you would check it.

Answer: Start at the tip and draw the left edge in one slow line down to the base, allowing a slight wave. From the base, draw the right edge back up to the tip, meeting the first line. Add a short internal line where the bract meets the stem. Check with a ruler: the drawn length should be close to 6 cm and the widest width close to 4 cm. Confirm no area is filled and the line is black on white.
