Red Panda Contour Drawing: A Line-Only Study

Original worked example / unchanged complete key

Prompt: A described reference shows a red panda seated facing left. The left ear tip is at the top. Draw one continuous contour from the left ear tip around the head, down the chest, along the front leg, around the tail curl, and back to the ear tip. Use a 12 cm by 12 cm redraw box as a hypothetical example size.

Answer: The finished line starts at the left ear tip, curves down the ear to the head, follows the forehead and snout, drops down the chest, traces the front leg to the paw and back up the inner leg, moves to the hind leg, sweeps around the tail curl to the right, returns along the back, and closes at the starting ear tip. No shading or fur marks are added. The checklist passes: ear edge connects to head, tail curl closes without a gap, and limbs connect to torso with one continuous line.
