Zebra Contour Line Drawing: Edge Study Without Stripes

Original worked example / unchanged complete key

Prompt: A student draws a zebra silhouette but leaves a 1 cm gap at the muzzle and draws three parallel lines across the neck. Using the convention above, identify the errors and state the fix.

Answer: The muzzle gap is an invalid break because no overlap explains it; redraw the upper and lower lip curves to meet at one nose tip point. The three parallel neck lines are stripe pattern, not contour; erase them unless one coincides with the neck edge or shoulder crease. After revision, trace the muzzle with your finger to confirm closure and list the remaining allowed edges.
