Cross-Contour Sneaker Drawing: Wrap Lines Around a Converse-Style Shoe

Original worked example / unchanged complete key

Prompt: A student sketches a Converse-style shoe with a rounded toe box, a side panel, and a sole. They draw one guide line across the toe that is perfectly straight. Explain how to correct it and what the corrected line should do.

Answer: Replace the straight guide line with a curved line that starts at one edge of the toe, bends forward over the rounded top, and ends at the other edge. The corrected line should curve more at the center of the toe and less near the edges, matching the toe's rounded surface. Then trace it with a slightly darker pencil as a wrapped cross-contour line.
