Contour Drawing of a Bishop: Mitre, Collar, and Base

Original worked example / unchanged complete key

Prompt: A reference bishop has a collar width of 6 mm. Using the convention, estimate the mitre height and base width, then describe the edge order for drawing the contour.

Answer: Mitre height is about 3 x 6 mm = 18 mm. Base width is about 4 x 6 mm = 24 mm. Edge order: mark top and bottom, draw finial oval, draw mitre arch down to collar, draw collar band, draw base trapezoid, connect sides, then check symmetry and proportions.
