Contour Line Drawing on Paper: Edges, Form, and Clear Line Direction

Original worked example / unchanged complete key

Prompt: A paper cup stands upright. Draw one edge contour and one form contour, then explain the line direction.

Answer: Draw a continuous line down the left side of the cup for the edge contour. Draw one curved line across the front where the cylinder turns away from you for the form contour. The edge line runs vertically; the form line runs horizontally around the curve. Spacing is closer near the sides where the form turns more sharply. This is one valid solution; starting elsewhere is also acceptable if justified.
