Overhead Hair Drawing: Crown, Part, and Fall Lines

Original worked example / unchanged complete key

Prompt: On a top-down head outline 10 cm wide, draw a crown origin at the center, a whorl circle of radius 0.5 cm, one main part to the forehead, one secondary part to the left ear, and six fall lines total. Check spacing and crossings.

Answer: The whorl circle is drawn at the center with radius 0.5 cm. The main part runs from the whorl circle to the forehead edge; the secondary part runs to the left ear edge. Three zones are labeled A (right), B (back), and C (left). Six fall lines are drawn: two per zone. The outline width is 10 cm, so the hypothetical spacing is 10 divided by 6, about 1.67 cm. Gaps are checked to be between 0.83 cm and 3.33 cm. No fall line crosses another or a part line, and every fall line starts at the whorl circle and ends at the outline.
