Map Hairstyles onto a Proportion Grid: A Cell-by-Cell Drawing Method

Topic reference / ordinary illustration

Ordinary topic reference. Hypothetical dimensions in the four tasks are supplied in their own text; this illustration is not their measured answer.

Map Hairstyles onto a Proportion Grid: A Cell-by-Cell Drawing Method

Worked example / complete source key

A reference hairstyle on an 8 by 10 grid has outline cells spanning columns B to F (5 columns) and rows 2 to 7 (6 rows). Row 3 contains three S cells. A copy spans columns B to E (4 columns) and rows 2 to 7 (6 rows), with two S cells in row 3. Identify the likely errors and state a correction.

Answer: The copy is one column too narrow horizontally and missing one strand landmark in row 3. Check column F cells for omitted outline segments and compare row 3 S positions with the reference. Correct by adding the missing outline cell in column F and the missing S landmark, then recount spans and S cells to confirm 5 columns, 6 rows, and three S cells in row 3.
