Manga-Style Everyday Object Drawing: Proportion Drills for Cups, Phones, and Bags

Original worked example / unchanged complete key

Prompt: A hypothetical cup measures 10 cm tall and 7 cm wide. Draw a comparison box, sketch a realistic outline, then apply one manga stylization choice: taper the sides slightly more than the real cup. Check that the manga outline still fits the box and reads as a cup.

Answer: Draw a box 10 units tall by 7 units wide. Mark the rim at the top, the base at the bottom, and the center line. Sketch the realistic outline with a rim slightly wider than the base. For the manga pass, taper the sides inward by about half a unit on each side while keeping the rim and base inside the box. The result is a cleaner cup outline that still matches the measured height-to-width ratio and remains identifiable without a label.
