Matisse Upside-Down Man: Cutout-Shape Drawing Lesson

Original worked example / unchanged complete key

Prompt: An inverted reference shows a Matisse-style man divided into 6 cutout shapes. A hypothetical tracing box for the largest shape is 6 cm wide and 4 cm tall. Draw the upside-down figure using orientation-check arrows, then view it right side up.

Answer: Draw two arrows at the top edge pointing to the reference top. Mark baseline and midline. Draw the largest shape in a 6 cm by 4 cm box, then add the remaining 5 shapes in their relative boxes. Check the arrows after each shape. Rotate the paper: the figure reads as a cutout man with 6 closed, bold-edged shapes. Accept small size variations if placement and style remain consistent.
