Drawing Mouths from Front, Angled, and Open Perspectives

Original tasks 1, 2 / independent work

Task 1

Front view: width 8 units, upper lip 1 unit, lower lip 2 units. Mark corners at 4 units from the centerline. Describe the seam and corner alignment.

Task 2

Three-quarter view: the front-view half-width is 4 units (corners 4 units from the centerline). In the angled view the near corner is 3 units from the centerline and the far corner is 2 units. If the front upper lip is 1 unit thick, what far upper-lip thickness is consistent with foreshortening?

Drawing Mouths from Front, Angled, and Open Perspectives

Original tasks 3, 4 / independent work

Task 3

Open view: upper lip 1 unit, lower lip 2 units, jaw opening 3 units. The mouth width is 6 units. Check whether the opening is consistent across the width if the left opening is 3 units and the right opening is 2 units.

Task 4

A comparison grid shows front upper lip 1 unit, angled far upper lip 0.5 units, and far-corner ratio 2/3. Is the angled value consistent with foreshortening?
