Paris Landmark Contour Drawing: Blind-Contour Practice with Edge-Only Outlines

Original worked example / unchanged complete key

Prompt: A student draws a blind contour of the tower's lower arch for 75 seconds, then draws an edge-only plate of the full tower. The plate shows the silhouette, the platform edges, and the inner arch boundary, but no shading. Labels are written in ordinary handwriting within 1 cm of each feature. The student measures the plate height as 18 cm and the practice box as 10 cm by 10 cm. Check the plate against the three completion criteria.

Answer: The plate meets the criteria: the silhouette closes, interior edges are limited to structural boundaries, and labels are legible and near their features. The blind contour is judged separately by attention, not resemblance. The measurements are recorded as hypothetical examples and should be replaced by the student's actual measurements.
