Pond Contour Drawing: Capture Shoreline Edges with One Continuous Line

Original worked example / unchanged complete key

Prompt: A reference outline shows a pond edge with a smooth bank for the first third, a root notch in the middle third, and a rock lip at the end. Draw one continuous shoreline line on a blank sheet, then describe how you would score it with the rubric.

Answer: Start at the left end of the smooth bank. Draw a gentle curve for the first third, keeping the pencil down. At the root notch, dip inward once and outward once, then continue. At the rock lip, make a short angular turn and end at the right endpoint. The line is single and unbroken. Score continuity 3 because the line is continuous; edge decision 3 because each turn matches a visible feature; proportion 2 if the middle third is slightly compressed; clarity 3 because a viewer can follow the line. Annotate the compressed middle third as the correction.
