Random Object Drawing Practice: Observation Prompts and Proportion Notes

Original worked example / unchanged complete key

Prompt: A described setup shows a rectangular eraser on a plain table. Its length is measured as 6 cm and its width as 3 cm. Draw a quick contour and write one proportion note using consistent units.

Answer: Contour sketch: a small rectangle with slightly rounded corners, drawn palm-sized. Proportion note: length is about 2 times the width, because 6 divided by 3 equals 2. The note uses centimeters for both dimensions and the sketch shows a rectangle clearly longer than it is wide.
