Draw Sugar Granules and Cubes: Shape, Texture, and Practice

Original worked example / unchanged complete key

Prompt: Draw one sugar cube and a cluster of five granules beside it, using a scale where the cube width equals four granule units. Use the isometric convention with parallel receding edges.

Answer: A cube with three visible faces, rounded corners, and parallel receding edge pairs; beside it, five irregular polygons each about one quarter of the cube width, with two or three facets and one short highlight stroke on two granules. Gaps remain between granules.
