Stylized Figure Drawing: Exaggerated Upper-Body Proportion

Original worked example / unchanged complete key

Prompt: A stylized figure has total height 12 units, hip at 5 units, knee at 3 units, and ankle at 1 unit above the foot baseline. Is its upper-body zone larger than its leg zone?

Answer: Yes. Upper-body height is $12-5=7$ units. Leg-zone height is $5-0=5$ units. The knee at 3 lies between hip 5 and ankle 1; the figure meets the top-heavy proportion rule in this worksheet.
