Draw Your Own City: A Three-Zone Scene Worksheet for Kids

Original worked example / unchanged complete key

Prompt: A child measures a 30 cm tall paper and chooses band heights of 9 cm sky, 12 cm buildings, and 9 cm street. The child draws a flat-roof tower, a pointed-roof house, and a stepped-roof hall, adds a crosswalk in the street band, and draws two clouds and a sun in the sky band. Check the band arithmetic and the checklist.

Answer: The band heights add to 9 + 12 + 9 = 30 cm, which matches the paper height. The scene has three labeled building types, one labeled street feature, and labeled sky details. The checklist is complete: three building types, one street feature, readable labels, and sky details inside the sky band.
