Draw Your Own Turkey Worksheet: Labeled Feather and Body Prompts

Original worked example / unchanged complete key

Prompt: A student draws a turkey outline with a fan tail, then draws seven back-layer feathers, five middle-layer feathers, and three front-layer feathers. The student labels the tail fan, wing, body, head, and wattle with five callout boxes. One leader line from the wing box crosses the body box line. What should the student fix, and what stays valid?

Answer: The student should redraw the wing leader line so it does not cross the body leader line and ends on one clear spot inside the wing. The feather layering is valid because the back layer has the most feathers and the front layer has the fewest, showing overlap from back to front. The five labels are correct, and the wattle label should point below the beak. After fixing the crossed line, the drawing meets the rubric.
