How to Draw a Mouth in Side Profile: Lip Projection and Jaw Alignment

Original worked example / unchanged complete key

Prompt: A profile face has lip height 8 units. The mouth corner is 2 units behind the chin front. Project the upper lip crest forward by 1 unit and the lower lip base forward by 1 unit. Find the lip midline position and state one closure check.

Answer: Lip midline is at 4 units from the upper lip crest (8 divided by 2). Both projected points are 1 unit forward of the face plane. Closure check: the upper and lower lip surfaces meet along a closure line from the corner without gaps, and the corner remains 2 units behind the chin front.
