Mushroom Contour Drawing: Trace Edges and Gill Lines

Original worked example / unchanged complete key

Prompt: A mushroom has a cap 6 cm wide, a stem 3 cm tall, and visible gills under the cap. Draw a contour line with gill edges using the convention: one outer silhouette, gill lines from cap rim to stem, no shading. Describe the order and one check.

Answer: Start at the left stem base, go up the stem to the cap junction, follow the cap underside to the left rim, trace the cap top to the right rim, return down the right underside and stem, and close at the base. Then mark the visible rim arc and draw gill lines from rim to stem, stopping at each boundary. Check that every gill line touches the rim and stem and stops; no line crosses the stem outline.
