How to Draw a Practice Swimsuit: Straps, Seams, and Body-Fit

Original worked example / unchanged complete key

Prompt: Draw a front-view swimsuit with straight over-shoulder straps, two side seams, and a body-fit contour. Use a torso rectangle 12 cm wide and 18 cm tall, with the baseline at the bottom edge and the midline 9 cm above the baseline. Place front strap points 3 cm from centerline at midline height, and back strap points 4 cm from centerline 1 cm above midline. Show each strap as two parallel lines with a 0.5 cm gap.

Answer: A completed drawing shows a light torso rectangle with centerline and midline. Two gentle side curves run from underarm to hip inside the rectangle. Four strap attachment points are marked: front at midline height, back 1 cm higher. Each strap is drawn as two parallel lines with a 0.5 cm gap. Two side seams follow the body-fit curves, with small breaks where straps cross. Two short tension cues appear near each underarm and hip. Final lines are darkened and construction marks erased.
