Draw a Realistic Snake: Scale Rows, Fangs, and Head Construction

Original worked example / unchanged complete key

Prompt: On a 15 cm body drawing, mark dorsal row spacing at 3 mm, offset lateral rows by 1.5 mm, and place two upper-jaw fangs on a 6 cm head with the front fang 4 mm long and the rear fang 3 mm long. Describe the check.

Answer: Draw the centerline, mark dorsal rows every 3 mm, and place lateral rows offset by 1.5 mm, curving them around the body. On the head, mark fang bases near the snout tip on the upper jaw, draw the front fang 4 mm and the rear 3 mm, both pointing down and slightly back. Check that row spacing is consistent, fangs connect to the jaw, and the eye sits above the jaw line.
