Draw a Seated Tubing Row: Pose, Tubing Path, and Motion Arrows

Original worked example / unchanged complete key

Prompt: Draw a seated side-view row with tubing anchored low and forward. Show start and finish hand positions, tubing path, and two motion arrows. Use the joint-angle guide and proportion check.

Answer: A completed drawing shows a bench line, a seated figure facing right, hip above the bench, knee forward, ankle below knee, torso leaning slightly forward, shoulder above hip. The start hand is forward of the knee with an open elbow angle near 150 degrees (hypothetical). The finish hand is near the lower ribs with a bent elbow near 90 degrees (hypothetical). Tubing runs as a smooth double line from a low forward anchor to the hand, passing outside the knee. One arrow points along the tubing toward the anchor; a second arrow near the elbow points back. Proportions are checked with a paper strip: torso about one and a half head heights, upper arm and forearm about one head height each (hypothetical examples).
